

Why Do So Many People Use Linksys Routers

Linksys is a division of Cisco Systems, Inc., and are the recognized global leader in VoIP, Wireless and Ethernet networking for home, and small business users. They are based in Irvine, California.

A Linksys router is the most popular model available today. There are several reasons for that. Linksys offers a very user friendly way to network all of your computers together. A few benefits of networking your computers with a Linksys router include:

- Share a high-speed, broadband cable or DSL Internet connection so everyone can surf the web simultaneously. Linksys Wireless Broadband Routers have four Ethernet ports and support up to 32 wireless users.
- Access your own private e-mail account while others surf the web. This is a perfect example of the flexibility Linksys gives everyone in your network.
- Share all types of files, including music, digital pictures, and documents
- Store your library of music, pictures, and files all in one place
- View digital pictures and listen to your music anywhere in the house
- Secure your computers against viruses
- Enjoy multi player and head-to-head games with friends or family from any room in the house
- Enjoy playing games online with people all over the world
- And many more...

A common complaint when using a Linksys router is interference between a 2.4 GHz phone system and the wireless network. A few things you can do is change the channel of the phone or the Router so they use different channels. You could also move the phone's base station so that it's farther away from the Router.

It is good to know that Linksys Routers only work with external cable or DSL modems featuring Ethernet ports. They do not work with ISDN, satellite connections, dial-up modems or modems featuring USB or RJ-11 connections. Linksys Routers are compatible with any platform that supports Ethernet and TCP/IP. The router must be connected to a cable or DSL modem.

Linksys offers a great support system for any problems you may be having. You view the FAQ's online at [Linksys.com](http://www.linksys.com). They have a discussion forum where you can ask questions to other Linksys users anywhere in the world. You can submit an email support ticket or call their 1-800 technical support hot line as well.

If you are not wireless or just need to upgrade the hard wired system you currently have Linksys offers the best protection and system performance on the market today. You can buy Linksys products online or at many different retailers including Best Buy, Radio Shack, Comp USA, Circuit City, Office Depot, and more.
