

## 2007 Lexus LS 460 Review

The new 2007 Lexus LS 460, the largest and most expensive sedan by Lexus is by far the best release so far by the luxury division of Toyota Motor Corporation. This fourth generation of the full-size RWD, which has been, for eighteen years, the flagship of Lexus has a more attractive and even more aggressive stance, thanks to Lexus new design style, L-Finesse.

The state-of-the-art exterior lighting features a Dual-swivel Adaptive Front Lighting System, with High Intensity Discharge (HID) headlamps which are more energy-effective, durable, and brighter than conventional halogen headlamps.

The Intuitive Parking Assist uses sensors to alert drivers when they get too close to other parked cars, and with the help of the Advanced Parking Guidance System, this car will virtually park itself. The electrochromic outside mirrors automatically reduce glare, when the light is too bright. A Smart Access Key activates both the doors and the ignition. The 19-inch wheels ensure an increased accuracy on handling.

The interior offers one of the most luxurious, executive-class seating available on the market: leather-trimmed seats, with a memory system which holds the driver's and the passenger's favorite position, the 8 GB hard-disk on the surround sound audio system, the voice-activated navigation system are but a few of the features which add up to making the Lexus LS 460 2007 one of the most comfortable cars available on the market.

A 4.6 liter engine with 380 hp and 367 lb-ft of torque (an amazing 36 percent more powerful than its predecessor) is actually the world's first V8 engine which combines port and direct fuel injection, powering an acceleration from 0 to 100 km/h in a staggering 5.4 seconds.

Another novelty is the eight-speed automatic transmission, which, together with the direct injection system and the dual variable valve timing, significantly reduce fuel consumption and emissions, earning this model a well-deserved certification as an Ultra-Low Emission Vehicle (ULEV II). The Dynamic Radar Cruise Control helps maintain a safe distance from car in front, and the Electronic Controlled Braking (ECB) system is set to increase the level of safety both in critical situations and while parking the car.

Its safety features include sophisticated airbag placement, for optimal protection for all passengers, the ECB, as mentioned above, ABS, both prepared by the Pre-Collision System, an advanced Tire Pressure Monitor System, and three-points seatbelts, ensuring a high level of protection in critical situations.

All features considered, the Lexus LS 460 2007 takes this combination of luxury, manageability and safety to new heights, bringing it ever closer to the much more expensive sedans from Rolls-Royce and Maybach.
