

Aftermarket Motorcycle Parts or OEM parts?

Contrary to what many believe, OEM (Original Equipment Manufacturer) motorcycle parts are not inherently better than aftermarket motorcycle parts. Like any product in a dynamic marketplace, aftermarket motorcycle parts manufacturers often find a way to improve upon the performance or the look of the part. A comparison of the two types of parts is often contrary to what many people assume.

OEM Motorcycle Parts:

An OEM part is part made by the same company that made the part for the original vehicle. Oftentimes, auto and motorcycle manufacturers don't make the parts themselves, but contract the job to a manufacturing company. A comparison of the two different types of parts shows the strengths and weaknesses of each.

Aftermarket Motorcycle Parts:

The manufactures of aftermarket motorcycle parts must apply for the rights to reproduce a part. Aftermarket motorcycle parts manufactures operate under strict guidelines and by nature of their profession must be absolutely precise in their design.

Good aftermarket motorcycle parts often can't be distinguished from the original. Additionally, manufacturers of aftermarket motorcycle parts have the flexibility to improve upon the design and the quality. Normally, aftermarket motorcycle parts are sold for much less than OEM parts. The possible downside to using aftermarket parts is, that if installed by a non-certified technician, could impact the warranty.

Finding Quality Aftermarket Motorcycle Parts:

Different company's aftermarket motorcycle parts will differ in look and quality. Your best bet is to find a highly reputable aftermarket motorcycle parts dealer who is in the know about all of the latest parts and manufacturers and who only offers the best quality after market motorcycle parts.

Who Uses Aftermarket Motorcycle Parts:

Those who build custom motorcycles use aftermarket parts to build bikes with fresh new designs and unique looks. Those with older model bikes often choose aftermarket motorcycle parts because parts for older models have often greatly improved since the original part was manufactured.

Insurance companies almost consistently choose identical aftermarket motorcycle parts to replace damaged bikes after an accident. When the price is cheaper and the quality is as good, if not better than the original, it makes sense to use aftermarket motorcycle parts.

Custom Aftermarket Motorcycle Parts:

Aftermarket motorcycle parts are essential for customized bikes. Aftermarket parts like wheels, tires, handlebars, frames, foot pegs, mirrors, etc. offer a great number of options in terms of customization. The wide variety of aftermarket motorcycle parts available today makes it easy to create an original looking bike.

There are lots of after market motorcycle parts to make fixing or customizing your bike inexpensive and simple. Before forking out too much cash on a comparable part, take stock of your aftermarket options.
