

## Can You Do Anything About The High Price Of Gas

As gas prices continue to rise to \$3 or \$4 a gallon on regular unleaded, we are all coming to the realization that high gas prices are here to stay. Unfortunately it is entirely possible that 6 months from now these prices may seem low. It makes me wonder "can anything be done about the high price of gas?"

Truthfully, we have no control on what the oil companies are going to charge. The only thing we can do is try to maximize our savings on the other end. Things like walking more when possible, riding a bicycle, taking the bus, or even car pooling are all easy ways to save money right now.

Many times these are not possible and a better solution is to try and stretch the gas we just paid a high price for. Better gas mileage means fewer trips to the pump, which means more money in our pockets and it still allows us to stay mobile when we need to be.

Certainly the way we drive can affect the miles per gallon we get when driving, which affects our pocketbook as well. Things like driving fast, stopping and starting, accelerating and slowing down, how we maintain our vehicles, and other things like this can have a negative affect on how often we have to fill up at the pump as well.

Ethos FR is a product that has been gaining recognition for what it does to reduce engine wear, save on fuel and oil, and help increase gas mileage. Ethos Fuel Re-Formulator makes your engine run smoother, cleaner and with more power, all while increasing your fuel mileage on an average 7% to 19% . Depending how much you drive, this is a very significant savings to you.

Another benefit of using Ethos FR is that it allows you to do something good for the environment by reducing emissions, fuel consumption, and engine maintenance costs. It is easy to use by just adding 1 ounce in your gas tank for every 10 gallons of gas. It is also recommended to add it to your oil in the engine to help lubricate it as well. It is a biodegradable and non-toxic product that you could even drink without causing harm to your body. It works with any type of fuel and is being used all over the world in both commercial and individual vehicles.

To summarize this article, Ethos FR helps you save money by allowing your vehicle to burn the fuel more efficiently all while helping keep the environment clean. We know that the high price of gas is not going to go down, but it will probably keep going up. Now you can do something about that with Ethos FR.
