

## How to Buy an Air Purifier

Fresh air is an absolute necessity. We used to rest assured that the air inside our homes are safe and are free of pollution. But now it is not so. Infact the air inside our homes are four to six times more polluted than the air outside. An air purifier would solve this problem in the best possible manner. Here are some guidelines that will help you to buy a good air purifier and help you to have long-term benefits from this investment.

How to go about it?

- HEPA air filters are the best choice. This is because these air filters are able to remove most of the particulate matter in the air around you. It would be a wise step therefore to buy a HEPA air purifier. The only point that needs to be remembered is that the HEPA filters need to be replaced at regular intervals. This would help to maintain its efficiency levels.

- An alternate choice to HEPA air purifiers would be the electrostatic ones. These do need to be regularly replaced. The charged plates that are there in this kind of air purifier needs to be washed only.

- An air purifier draws the in air from the room with the help of a fan. Then the air is cleaned purified and the fresh air is released into the room again. What you should remember is that it will not remove odors. When you are buying an air purifier do not look for a combination. What you can do is to provide accessories like deodorizers that that have activated carbon or UV purification system.

- The price is another very important factor that has to be borne in mind. When its price is higher than the other available air purifiers it means that it incorporates a huge number of benefits as well. A good quality air purifier will have both a HEPA filter as well as a pre-filter. The built in pre-filter absorbs some of the large particles and this helps the HEPA air filter to remain working for a long time. It is due to this that the HEPA air filter has a long life and does not need frequent cleaning. Though the prices are a little more than the rest it is worth the payment.

- The last but not the least: you should check repeatedly to see whether the manufacturer is making any empty claims about the efficiency of the air purifier. There are ways by which you can find out the rate of air that has been cleaned and you should benefit from these.

These points will help you to choose an air purifier wisely and breathe in clean and fresh air.
