

## K&N Cold Air Intakes And Air Filters - A Brand With Trust And History

Today, there isn't a performance enthusiast on the road using an antiquated paper filter, and the most of them are running K&N filters.

K&N is a global enterprise with offices in California and Europe. Still family owned, K&N is as dedicated to high-performance motoring as they were when the company started nearly 4 decades ago. K&N's enthusiasm for performance, and their connection to motorsports are the forces driving the company to the top.

No longer content with producing the finest air filters on the market, K&N has been busy expanding their product lineup. Performance air intakes, Fuel Injection Performance Kits, and Gold oil filters round out their 3,500 product offerings. If you're looking for performance, K&N has a product for you.

K&N is easily the most recognized brand of performance filters on the market. Many follow their footsteps, but few have the impact of K&N Engineering. Constant testing, research and development are what keep K&N in the performance driver's seat.

K&N Engineering has committed themselves to bringing you the highest-quality performance products available. Don't settle for the underdeveloped and aging technologies of lesser brands when K&N brings you the most advanced performance accessories money can buy. And, for a complete collection of K&N Engineering products shipped right to your door, there are many online stores to find K&N products at.

Below are a few of the K&N product reviews that we have found from some K&N brand users:

"Right after I put the filter in I could feel a difference. The car had alot more pickup and I could here more air racing into the engine."

"Since installing the K & N air filter in my 2000 dodge Stratus I made a round trip of 3000 miles. Mileage increased by 1.8 mpg! Works great. Performance also improved with better acceleration from my little 2.0L I look forward to checking mileage and performance on my 1990 Chev PK soon and expect a boost in both."

"Was really impressed with my honda accord's filter, made a noticable difference in performance. Our Hyundai Elantra the difference was almost non-noticable. Pretty easy to use, either way a great money saver over time."

"I've been driving for over 20 years and never used any filter beyond what I could pick up at a WalMart. Big mistake! My K&N will definately save me money in replavement filters, more then that, Im getting an average of 1.5mpg more. In these times of high gas prices, V8s need all the help they can get."

With a well-known brand like [K&N](#), you can surely find vehicle performance improvements with [k&n filters](#) and a [K&N Cold Air Intake](#). â€“ David S. Brooks
