

The Benefits of Applying Diamon Fusion Glass Guard on Your Windshield

When it comes to safe driving, Diamon Fusion Glass Guard provides you with the clear visibility and increased reaction time to the driver. Whether it is traveling through rain or removing chips, the hydrophobic coating used by Diamon Fusion provides an enhanced quality of driving. Everyone travels through rain at some point in their lives, so why not be safe while doing it.

There have been a plethora of studies on improving windshield visibility for cars, and Diamon Fusion's hydrophobic coating is by far the best thing out there. By applying the hydrophobic coating to your cars windshields and side glass, you can improve your visibility during rainy conditions by over 30. It is these kinds of numbers that make Diamon Fusion Glass Guard's hydrophobic coating worth the price.

Diamon Fusion Glass Guard lasts much longer than any other kind of glass guard that is comparable. Its durability and strength increases safety for your car, the windshield, and most importantly yourself. Because of the increased visibility by using the hydrophobic coating, there is less of a need to use windshield wipers for a light rain. In turn, your windshield will be less affected by the abrasion of the windshield wipers and will last much longer.

Another feature of the hydrophobic coating is the reduction in chips, dents and cracks to your windshield. Driving on the road puts your car at risk for flying objects such as gravel, rocks and dirt. While these flying objects would typically chip your windshield, most will bounce right off of a Diamon Fusion treated windshield.

With the elimination of most dents, chips and cracks due to flying objects during a typical drive, it will limit the amount of times you have to get your windshield repaired. There have been test results that show that an object must weigh 10 times more to cause the same damage to a Diamon Fusion treated surface than an untreated surface. It is certainly a hassle and a hefty price tag to repair a windshield, so you might as well prevent what you can.

With the ability to increase your visibility and eliminate those nagging cracks and chips in your windshield, Diamon Fusion Glass Guard is the best thing you can buy for your car. Not only will you be saving trips to repair your windshield, but you will save trips to the hospital by increasing your reaction time and improving your response rate with Diamon Fusion's hydrophobic coating.
