

## Internet Cafe Software

GETKO is a software solutions for the operation of an Internet Cafe, Cyber Cafe, Gaming Center, Internet Center or PC rental system. Designed primarily for billing Internet Cafe business and also can be used to control the PCs on your intranet. System functions and user interface has been designed to be easy to use with little or no experience in the computer industry. The software allows you to set up various marketing plans for each user to chose from.

GETKO is Client / Server application which allows you to easily manage and monitor all client machines status remotely from the Server in on-line and in real time. Administrators can just monitor or manage the things at clients easier from the server, such as shutdown, reboot, Wake-up on LAN, force the user to log-out, see the running applications, Remote Virtual Desktop, etc ....

\* The complete Client Server solution for your network of public access computers.

\* The #1 choice for Internet Cafe's, gaming centers, libraries and more...

This is a centralized Server version of the GET KO™. Each customer PC will be installed with NetTime Client. All of the NetTime Client PCs connect to NetTime Server from which you can centrally manage your NetTime Network.

We have been producing Internet Access Time Management solutions and Internet Cafe Software for over 10 years and have sold our products all over the world.

Our team specialize in timer software and software based control systems for Windows 98/ME/2000 and XP.
